

# OUR SERVICES

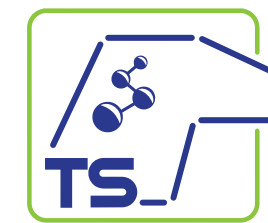

## GAS LEAKS

Even small leaks in gas or oil pipelines can lead to high costs. Locating leaks by means of the most sophisticated equipment is expensive, time-consuming and often impossible in remote areas. With TÜV-certified dogs, The Sniffers offers the best solution for detections in every terrain, even in snow-covered areas. The unique method of using detection dogs to detect gas leaks has shown to be more than successful over the years and has moreover surpassed the strict political and economic regulations in all areas. TÜV-certified dogs: the fastest, most flexible and most cost-efficient detection technique for both above-ground and underground pipelines.

## LOCALISATION OF ELECTRICAL SHORT CIRCUITS

The detection of short-circuits in circuits that are often very large is a labour-intensive and time-consuming process. By using trained dogs, short-circuits can be located quickly and accurately in low and medium tension underground circuits. The ideal solution for minimising down time and optimising repairs.

# ABOUT US

The Sniffers is a renowned leading expert in leak detection with TÜV certified dogs. With over 20 years of experience working with highly trained dogs, we have extended our services through many success stories in other fields of detection, including electrical short circuits, illegal pipeline tapping and water leak detection.

With more than 200 million scent receptors, which is more than 50 times as many as humans have, our trained dogs are able to smell parts per billion (PPB) while the most sophisticated equipment is only able to detect parts per million (PPM).

We recently established a new division that specialises in detecting explosives in airports and sea ports, locating narcotics, locating stowaways and missing persons, assisting in cancer studies, providing security and high-risk management.

The Sniffers takes pride in assisting you with a personal **one-on-one service** to fully satisfy your project needs.

**Each project is custom-made.**

## COMPREHENSIVE APPROACH

We pioneered special trained dogs that are able to detect leaks which are immeasurable with the best available detection services. A unique and very successful method. The Sniffers is the first company in the world to have TÜV certified dogs and a TÜV certified method of training dogs.

## INTERNATIONAL EXPERTISE

The Sniffers is an esteemed market leader in leak detection with TÜV certified dogs. With more than 20 years of experience we have built expertise in numerous small scale and multinational projects. The result? Knowledge that is internationally applicable and more than 200 loyal clients.

## EXPERTS IN LOCAL REGULATIONS

Every country, region or client has its own legislative requirements & guidelines. Our specialists are experts in understanding & interpreting local regulations, guidelines and protocols.

## SAFETY & QUALITY

Safety and quality are our priorities. This requires continuous improvement of our services and a quality guarantee towards all our clients. Health, safety, security and a better environment are our key areas.

# OUR CASES

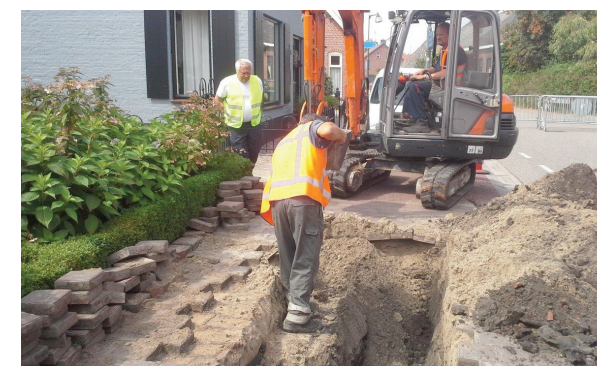

## GAS LEAKS

Case: Total France. 800 km of underground ethylene pipelines from Marseille to Metz.

## LOCALISATION OF ELECTRICAL SHORT CIRCUITS

Case: Enexis. During a test case in the Netherlands, trained dogs locate power disruptions.

# OUR SERVICES

## ILLEGAL PIPELINE TAPPING

Oil, ethylene, propane...regardless of which valuable substance is flowing through your pipelines, illegal pipeline tapping is a major problem in many countries. You can see that it's happening, but finding the cause - often over hundreds of kilometres of pipelines - is not easy. Illegal tappers are getting much more creative and your pipeline infrastructure often runs through forests, mountains, rivers and other places that are difficult to get to. The Sniffers has the answer to this difficulty. Our TÜV-certified dogs are specialised in locating illegal tapping installations. The result? Time and again, our dogs succeed in locating illegal tapping sites along hundreds, often heavily guarded, difficult to access kilometres of pipeline. Quickly, accurately and cost-effectively.

## EXPLOSIVES

Cargoes are screened faster with detection dogs. The dogs work extremely accurately, can screen large quantities of cargo quickly, and never interrupt the supply chain. In the Netherlands we are one of the few companies that have received all permits, from the National Coordinator for Counter-Terrorism and Safety (NCTV), to deploy explosive detection dog teams at all airports for the purpose of cargo screening.

## NARCOTICS

Our dogs are the ideal weapon against drug smuggling. At events, concerts or drug trafficking. In cases of individuals or cargoes, in aeroplanes, trains or trucks, with noses that are highly trained for every substance, our dogs can detect any substance anywhere, no matter how difficult to reach.

## OTHER SERVICES

The possibilities of dogs are nearly infinite. From detecting water leaks in irrigation and cooling systems and locating stowaways or missing persons during disasters to finding money and medicine and assisting in cancer studies. Every substance can be detected. In our constant search for new applications, we can always offer our clients custom work, perfectly configured to meet their needs and wishes.
